AUTHOR: Vedenov, G.

TITLE: Resonance damping of sound in a metal in a magnetic field 60

SOURCE: Fizika tverdogo tela, v. 5, no. 5, 1963, 1310-1315

TOPIC TAGS: spiral waves, resonance damping, sound damping

ABSTRACT: The authors examine the conditions under which resonance between spiral waves and sound takes place in metals in a magnetic field and their results are shown in Figs. 1 and 2. They find that a spiral wave is damped when resonance is still far away, when the associated sound wave is not damped. At the point of resonance, when the coupling is weak, damping of the spiral wave decreases, but damping of the sound wave now appears. At the maximum damping of the sound wave the damping is approximately 0.01 the resonance frequency. Damping of the spiral wave decreases a like amount. When the coupling is strong, the damping of both waves at the point of resonance is the same. Damping of the spiral wave increases with decrease in conductivity. This is in agreement with the experimental observations of R. Bowers, C. Legendy, and F. Rose (Phys. Rev. Lett., 7, 339, 1961). "I wish to extend heartfelt thanks to Ye. P. Velikov and A. A. Vedenov for proposing the problem and to M. A. Leontovich for valuable advice during writing of the paper."

AUTHOR: Akramov, G.

TITLE: Degenerate pinch in InSb

SOURCE: AN SSSR. Doklady, v. 161, no. 3, 1965, 554-555

TOPIC TAGS: semiconductor plasma, pinch effect, current breakdown, carrier mobility,
pinch current

ABSTRACT: The author derives a formula for the current-voltage equation of a

degenerate pinch in InSb. The formula is obtained by solving the hydrodynamic equations for

current density and carrier density in the presence of a magnetic field.

The current-voltage characteristic is plotted for the case of a current density

which is 10 times larger than the critical current density.

TITLE: Optimization of weight and power characteristics of a self-cooled solar thermoelectric converter

SOURCE: Geliotekhnika, no. 3, 1966, 6-10

TOPIC TAGS: solar energy conversion, solar radiation, thermoelectric generator, thermoelectric converter

ABSTRACT: Calculations were made of the mode of operation, optimal weight, and power characteristics of a metallic concentrator serving simultaneously as a heat-removing radiator. To determine the geometrical and thermal parameters of the instrument, the temperature field of its surface and the dependence of the parabola parameters on the thickness of the shell were investigated. It was established that, if the temperature of the hot junction increases, the minimum in the weight-to-output power relation (W/P) shifts toward higher radiator temperatures, and that a decrease of W/P leads to optimal temperatures of the hot junctions. If this temperature

Card 1/2

ACC NR: AP6027438

APPROVED FOR RELEASE: 06/05/2000 CIA-RDP86-00513R000100710018-3"

becomes higher than optimal, large thermal losses occur, and, consequently, the efficiency of the system falls and the W/P ratio increases. The optimum ratio of the values of the radiator and hot junction temperatures is $3/4$ on the Kelvin scale. Since, in practice, the generator does not work in an optimal mode, the admissible ratio of radiator temperatures and those of the hot junction are to be found in the range of 0.6–0.8. The general weight of the system depends also on the radius of the concentrator, which, when increased, increases by $R^{3/2}$ the weight of the solar generator for a unit of power. Orig. art. has: 4 figures, 2 formulas, and 1 table. [ZL]

VAlkaloids of seeds of *Lolium cuneatum*. S. Yu. Yunusov and S. T. Akramov, *Zhur. Obshchey Khim.* 25, 1819-20, No. 9 (1955).—The $(\text{CH}_3)_2\text{C}$, ext. of the seeds of *L. cuneatum* gave a CHCl_3 -sol. fraction of alkaloids which made up 0.25% yield on seed wt. The following alkaloids were isolated by fractional distn.: *toluidine*, crude, b_p 85-93°; *carbonate*, m. 102-3°, which can be sublimed ($H\text{Cl}$ salt, m. 215-10°); *methiodide*, m. 210-12°; *loline* (I), $\text{Ca}(\text{Hg})(\text{NMe})(\text{NH})$, b. 103°; *di-HCl salt*, decom., b_p 220°, $[\alpha]_D^{25} 0.2^\circ$, used for purification of the free base, b. 120°, $[\alpha]_D^{25} 1.1343$, $n_D^{20} 1.6605$, $[\alpha]_D^{25} 18.0^\circ$ (*di-HBr salt*, decom., 254-5°, $[\alpha]_D^{25} 2.5^\circ$; *di-HI salt*, decom., 233-5°, $[\alpha]_D^{25} 5.0^\circ$; *dimurate*, m. 148-9°, $[\alpha]_D^{25} 0.18^\circ$; *mononitrate*, m. 209-10°; *perchlorate*, decom., 282°; *sulfate*, decom., 280-1°; *picrate*, decom., 258-60°). I. *MeI*, m. 210-12° (from dil. MeOH), is accompanied by *N-methylololine-MeI*, decom., 257-9°, $[\alpha]_D^{25} -4.84^\circ$, on treatment of I with *MeI*; the latter is sepd. by virtue of greater solv. in aq. MeOH . I (2.6 g.) with 0.95 g. 40% formic acid and 0.59 g. $\text{H}_2\text{CO}_3\text{H}$ re-

fluxed 8 hrs. gave 0.1 g. *N-methylololine*, b_p 90-1°; $d_{40}^{25} 1.0172$, $n_D^{20} 1.6638$, $[\alpha]_D^{25} 0.31^\circ$; *nitrate*, decom., 144-5°, $[\alpha]_D^{25} 0.8^\circ$; *HCl salt*, decom., 246-8°; *di-HBr salt*, m. 198-0°, $[\alpha]_D^{25} 5.1^\circ$; *picrate*, m. 183-4°; *methiodide*, m. 258-60°. Treatment of I with 20% H_2SO_4 and NaNO_2 gave *nitro-loline*, b_p 140-5°, m. 64°, $[\alpha]_D^{25} 22.8^\circ$; *perchlorate*, m. 195°; *picrate*, m. 194-5°. The nitroso compd., with hot concentrated HCl yields I. I and Ac_2O at reflux gave *acetyloline*, m. 73°, b_p 164-6°. *Benzoyloline* m. 187° (*perchlorate*, m. 194°); *picrate*, m. 172°; hydrolysis with MeOH-KOH gave loline. The 3rd alkaloid found is *loline*, or *N-acetyloline*, crude, b_p 145-60°, pure, m. 73°, $[\alpha]_D^{25} 36.9^\circ$ (*HBr salt*, m. 220-7°, $[\alpha]_D^{25} 7.6^\circ$; *HCl salt*, m. 197-8°, $[\alpha]_D^{25} 36.9^\circ$; *perchlorate*, m. 174-6°; *picrate*, m. 195-6°; *methiodide*, m. 145-6°). The free base refluxed with MeOH-KOH gave loline.

SOV/79-30-2-69/78

AUTHORS: Yunusov, S. Yu. Akramov, S. T.

TITLE: Investigation of Alkaloids of Lolium Cuneatum.
Communication II.PERIODICAL: Zhurnal obshchey khimii, 1960, Vol 30, Nr 2,
pp 677-682 (USSR)ABSTRACT: The authors reported previously (this J., 1955,
Vol 25, p 1813) the separation of 3 new alkaloids
from the seeds of Lolium cuneatum Nevski (fam.
Gramineae), which they named lolininidin (I), lolin
(II), and lolinin (III).

It was also established (Izv. AN UzSSR, ser. khim.,
1957, Vol 2, p 69) that dichloroethane condenses
readily with alkaloids containing primary and

Lolium cuneatum seeds with chloroform; the extract, after separation of substances soluble and insoluble in acetone, gave, on treatment with a methanolic solution of HCl and a methanolic solution of sodium perchlorate, a new alkaloid named norlololin (VIII), obtained in the form of its diperchlorate. Free norlololine had a bp 94-95° C at 2 mm; d^{20}_{40} 1.1793; n_p^{16} 1.5220; on standing, it absorbed CO₂ from air and gave a crystalline carbonate (mp 141° C).

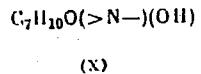

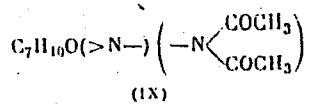

It was shown that VIII is identical with the product of oxidation of lolin with KMnO₄ in an acid medium, and that it gives easily dinitrates, dihydrochlorides and dipicrates. Acetylation of VIII gave N-diacetyl-norlololin (IX) bp 190-195° C at 2 mm, a glass-like, noncrystallizable substance, which on heating with

Cuneatum. Communication II.

77918
SOV/79-30-2-69/78

30% sulfuric acid gave again VIII. Diazotization of VIII gave a crystalline amino alcohol (X; mp 192° C), named by the authors heminorlololin, which gave readily the corresponding hydrochloride, bromohydrate, and picrate.

Methylation of VIII with formaldehyde and formic acid in 1:2:2 molar ratio gave N-methyl lololin (XIV), which with KMnO_4 and sulfuric acid (2 g-atoms O), was oxidized to II; similar oxidation in acetone (6 g-atoms O) gave VIII.

TITLE: Investigation of alkaloids of certain species of Papaver N. Roemeria and the structure of fugapavine

SOURCE: AN SSSR. Izvestiya. Seriya khimicheskaya, no. 3, 1965, 502-509

TOPIC TAGS: alkaloid, isomer, plant chemistry, drug

ABSTRACT: Papaver commutatum Fisch. et Mey contains papaverine, Armepavine, floripavine, and two new alkaloids: d-isoremerine and fugapavine, which is 3-oxo-5, 6-methylenedioxyporphine, have been isolated from Papaver fugax Poir. The existence of l- and d- remerine and l- and d-isoremerine is accounted for by the isomerism associated with spatial configuration of the dihydrophenanthrene skeleton, the nitrogen-containing ring, and the asymmetry of the >N-CH₃-group. The second base isolated from the nonphenol portion of the total alkaloids of P. fugax has a melting point of 178.5-179.5°, $\alpha_D^{25} -116^{\circ}$, composition C₁₈H₁₇NO₃. The base contains tertiary nitrogen, and a methylimide and methylene dioxy-groups. From composition and physical chemical constants, this base is not reduced to one of the alkaloids known and described in the literature. The authors named it

TITLE: Investigation of the alkaloids in Corydalis gortschakovii and Corydalis pseudoarunca

SOURCE: AN SSSR. Doklady, v. 162, no. 3, 1965, 607-609

TOPIC TAGS: alkaloid, plant chemistry

ABSTRACT: The underground part of C. gortschakovii yielded protopin, isocorydine, and an alkaloid of aporphinic type with substituting groups in positions 3 and 4.

The underground parts of C. pseudoarunca yielded protopine, and the bases A, B. and C. The base A is bicuculline. The base B is the dextro rotatory form of the familiar alkaloid hydrastine. The base C is dl-bicuculline. Another substance was found, the dimethyl ester of which has the same properties as xylopinine. The name coramine is suggested for the base. [JPRS]

At the geographic faculty the diseration of candidate of geographical sciences Z. M. AKRAMOV was defended at the end of the 1952-1953 school year. In the work by Z. M. AKRAMOV Namanganskaya oblast' (ekonomiko-geograficheskaya kharakteristika) he analysed a large quantity of actual material on the nature, population, and economy of the Namanganskaya oblast' of the Uzbek SSR, which can be used by the planning organizations. According to the review of the official opponent, associated member of the Uzbek SSR Academy of Sciences G. N. Cherdantsev, the most valuable aspects of the dissertation are the practical proposals for further development of the national economy of the oblast'. A high rating was given to the monography of Z. M. AKRAMOV by the senior scientist of the Institute of Geography, Academy of Sciences USSR, S. N. Ryazantsev. Nevertheless he pointed out that the dissertation is overloaded with handbook data. In his opinion the work by Z. M. AKRAMOV gives a great deal of material for a book on the Namanganskaya oblast'.

growing, and local industries, including food-processing. In addition, prospects for a more extensive development of the Oblast's natural resources are weighed, as are those for creating a base for heavy industry. Data on output of factory products (light and textile industries) end with 1950. There are 25 figures (including maps) and 114 Soviet references.

Uzbekistan v shestoy pyatiletke (Uzbekistan in the Sixth Five Year Plan) Tashkent, Gosizdat UzSSR, 1957. 86 p. 10,000 copies printed.

Ed.: Aksel'rod, M.; Tech. Ed.: Dervas, I.

PURPOSE: The book is intended for economists and the general reader.

COVERAGE: The book covers the economic development of the Uzbek SSR under the Sixth Five Year Plan, i.e., the current plan. Factual data refer mostly to 1956; the rest of the material refers to plans and estimates. In addition to material on industries, the book surveys the state of Uzbek agriculture and animal husbandry, as well as some of the more important cultural aspects of the Five Year Plan. Particular attention

Card 1/4

Uzbekistan in the Sixth Five Year Plan
